

For general turf applications and overseeding, the versatility, genetic diversity, and superior quality of our modern turf-type tall fescue blend make it an unmatched choice. Preferred Turf features a slightly wider blade than Kentucky bluegrass, while maintaining a finer texture and softer feel compared to K-31 tall fescues. Its deep-rooting nature ensures exceptional drought resistance, outperforming other cool-season turf grasses. Carefully selected for compatibility in color and texture, each variety in the blend creates a uniform and visually appealing lawn. With quick establishment and premium turf quality, this blend is engineered to deliver exceptional results for a wide range of applications.

### Preferred Turf

Net Wt. 50 lbs.

Lot # MSC-PT25-1	Purity	Germ	Origin
Titan GLX Tall Fescue	24.92%	85%	WA
GroPro Tall Fescue	24.80%	85%	WA
Galactic Tall Fescue	24.83%	85%	OR
Greenspan Tall Fescue	24.84%	85%	OR

Other Crop 0.01%      Inert Matter 0.57%      Weed Seed 0.03%  
 NOXIOUS WEED: NONE      AMS 661      Test Date 11/24

The seller makes no warranty, whether expressed or implied, except that the product conforms to the description on the label. The buyer agrees that the seller's liability under this warranty is limited to the amount of the purchase prices and the seller has no responsibility for special, consequential, or contingent damages.

The functionality of the mix will remain unchanged, however the mix composition and percentages of individual species may vary depending upon seed availability.

## New Lawn/Repairing Bare Spots

1. Till soil 5-6 inches deep, level with a rake, and compact, leaving the top 1/2 inch loose.
2. Evenly sow seeds at the recommended rate and lightly rake them into the soil.
3. Apply a starter fertilizer before or after seeding to promote root development.
4. Cover with an erosion control blanket or pelletized mulch to retain moisture
5. Water frequently with light applications until seedlings are well established.

## Overseeding Existing Lawns

1. Mow the lawn short and loosen the soil using a rake, aerator, or power-rake.
2. Spread seed evenly at the overseeding rate and lightly rake to ensure soil contact.
3. Water lightly and frequently, keeping the soil moist until seedlings emerge.
4. Apply a light starter fertilizer once seedlings are visible for strong growth.

## Maintenance Tips

For both methods, use a systematic fertilizer program after establishment.

Caution using straw bales, which can introduce weeds; opt for pelletized mulch instead

### COMPONENTS

- 100% Turf-Type Tall Fescue  
(Minimum 3 varieties)

### FEATURES

- Excellent heat resistance
- Wide area of adaptation
- Ideal for sun and shade
- Moderately fine leaf texture
- Excellent wear tolerance
- Improved disease resistance

### USES

- Lawns
- Commercial Sites
- Parks

### SEEDING RATES

- New Turf  
7-10 lbs./1,000 ft<sup>2</sup>  
400-450 lbs./Acre
- Overseeding  
5 lbs./1,000 ft<sup>2</sup>

### SEEDING DATES

- SPRING  
March-May
- FALL  
August-October
- DORMANT  
December-March

### MOW HEIGHT

- Ideal 2.5-3.5 in
- Max 4 in
- Min 1.5 in
